

Rockets and Robots

Half of Y8 had a fabulous opportunity to have hands-on experience of science and technology over two days.

On Friday, the team from Exscitec arrived. The students were given their first challenge: build a rocket. All the teams worked hard and the rockets were launched in the playground. (One even went on the roof!)

They were treated to a presentation about explorer robots on Mars and given a new challenge: design and make a robot that can play football.

On Saturday, the teams came back to finish their machines. To round off the day, the teams played several exciting matches of football with their robot creations as players.

Excellent team work

It IS rocket science

Footballing robots
